This test report is governed by the Terms and Conditions, available on request or attached to the end of this test report. Attention is especially drawn to the limitations of liability, indemnification and jurisdictional provisions defined therein. This report is issued strictly based on the testing of the samples submitted by you. The test results in this report refer only to the sample(s) actually tested and do not refer or be deemed to refer to any bulk production from which such sample(s) may be said to have been obtained. In the event that Eurofins MTS Consumer Product Testing US, Inc. ("ERF") was requested to survey and test any bulk production quantity of samples, ERF, in the absence of any contrary written instructions, performed random sampling of bulk production for testing purposes. Variations in the conditions under which samples are stored, transported, etc., may lead to variations in the test results. ERF cannot anticipate and shall not be held responsible for variations in test results that may be due to factors beyond ERF's control, such as, sample cross-contamination, evaporation of volatile substances due to storage temperature, humidity, etc. This report does not constitute a recommendation, actual or implied, for any specific course of action. Other than the expressed warranties made in the Terms and Conditions of the ERF Test Request Form, ERF makes no warranties or representations either expressed or implied with respect to this report. In no circumstances whatsoever shall ERF be liable for any consequential, special, or incidental damages arising out of, or in connection with, this report.

USA Toxicological Risk Assessment, California Proposition 65 Report

TEST:

Evaluation of “**Mussel Polymers, Inc., SeaTak™ Underwater Adhesive**” for requirements of applicable sections of U.S. Federal Hazardous Substance Act (FHSA) Regulations (16 CFR 1500), California Proposition 65 and requirements for Toxicology Risk Assessments, 67323-040050.

Product Information:

According to the submitted ingredient list, “**Mussel Polymers, Inc., SeaTak™ Underwater Adhesive**” contains Polypropylene Glycol, Polymethylenepolyphosphorylisocyanate Polymer (CAS #53862-89-8), 4,4'-Methylenediphenyl Diisocyanate (CAS #101-68-8), Diphenylmethanediisocyanate (CAS #9016-87-9), Silicon Dioxide (CAS #67762-90-7), and Proprietary Polymer, as a starting raw material.

Background:

Quantitative list of the ingredients in “**Mussel Polymers, Inc., SeaTak™ Underwater Adhesive**” was submitted to the reviewer. Specific physical and chemical form of the product, bioavailability, concentration, and the amount of each potentially chronic toxic component found in the formulation is determined from examination of the formulation, labeling, packaging and instructions for use supplied by the manufacturer and from examination of the product.

The review of the formulation of the submitted “**Mussel Polymers, Inc., SeaTak™ Underwater Adhesive**” sample was conducted by a board certified toxicologist, Jongsei Park, Ph.D. (Fellow, Academy of Toxicological Sciences, Diplomate, American Board of Forensic Toxicology, CLD, American Board of Bio-Analysis) according to the criteria defined in the U.S. Consumer Product Safety Commission (CPSC) Regulation, California Proposition 65.

TOXICOLOGY DEPARTMENT

67323-040050 (US TRA CA-PROP 65)

This review considered all the available data including the relevant data from the U.S. National Toxicology Program and the World Health Organization's International Agency for Research on Cancer and other sources of information in the U.S. National Library of Medicine's toxicology databases. All this information was used to assess the need for chronic health hazard warning including carcinogenesis, reproductive/teratogenetic hazards, neurotoxicity and other potential chronic adverse health effects. Relevant information on bioavailability and exposure were also considered. In the absence of specific information, reasonable judgments were made to realistically assess the potential hazards of this material.

Exposure Assessment:

In evaluating acute and chronic toxic effects of each component and of the total formulation of "**Mussel Polymers, Inc., SeaTak™ Underwater Adhesive**" according to the information supplied, physical and chemical form, customary or reasonably foreseeable handling and use, including possible accident or misuse, and any adverse health effects of decomposition or combustion products were taken into account. Assessment of exposure was done using the applicable sections of U.S. Federal Hazardous Substance Act (FHSA) regulations, guideline on 16 CFR 1500. The following exposure route(s) were considered: Inhalation, Oral ingestion and Dermal exposure.

Toxicity Assessment:

Generally accepted, well established scientific, epidemiologic and toxicological knowledge of the bioavailability, pharmacokinetics, toxic effects (acute and chronic) of each component and of the total formulation obtained as necessary through on-line access to the National Library of Medicine Toxicology data networks, including the Hazardous Substances Data Bank, the National Institute for Occupational Safety and Health Registry of Toxic Effects of Chemical Substances, the National Cancer Institute sponsored Chemical Carcinogenesis Research Information System, the U.S. Environmental Agency sponsored Integrated Risk Information System and Genetic Toxicity file, the Oak Ridge

TOXICOLOGY DEPARTMENT

67323-040050 (US TRA CA-PROP 65)

National Laboratory Environmental Mutagen Information database and the U.S. EPA and NIEHS sponsored Developmental and Reproductive Toxicology/Environmental Teratology Information file were taken into account.

Opinions of various regulatory agencies and scientific bodies on the potential for chronic adverse health effects of the various components of the formulation obtained from the publications of these agencies and the data sources listed above were used for evaluation. To assess product's toxicity, well established safety factors of 10 – 100X for acute effects, 100 – 1000X for chronic health effects, 10⁻⁶ risk at the 95 % upper bound of a multistage model for reproductive toxicants, or limits were used in determining whether or not a product would require acute or chronic health hazard labeling.

Summary and Conclusion:

After reviews of the supplied information and risk assessment based on hazards, exposure potential, acceptable daily intake and appropriate safety factors, I found **"Mussel Polymers, Inc., SeaTak™ Underwater Adhesive"** contains 4,4'-Methylenediphenyl Diisocyanate (CAS #101-68-8) which is listed in Table 3 of Annex VI of Regulation (EC) No 1272/2008 on CLP based on UN GHS. It carries the classification of Carc. 2, Acute Tox. 4, STOT RE 2, Eye Irrit. 2, STOT SE 3, Skin Irrit. 2, Resp. Sens. 1, and Skin Sens. 1. It should carry the signal word **"Danger"**, hazard statements, "Suspected of causing cancer (H351)", "Harmful if inhaled (H332)", "May cause damage to organs through prolonged or repeated exposure (H373)" "Causes serious eye irritation (H319)", "May cause respiratory irritation (H335)", "Causes skin irritation (H315)", "May cause allergy or asthma symptoms or breathing difficulties if inhaled (H334)", and "May cause an allergic skin reaction (H317)" and pictograms of

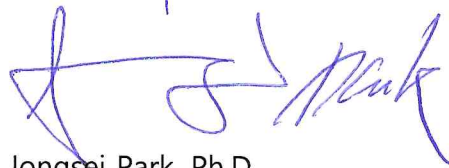

TOXICOLOGY DEPARTMENT

67323-040050 (US TRA CA-PROP 65)

Containers of materials larger than one ounce must have full precautionary labeling as determined by manufacturer. Where containers of materials which require warning labels are packed in the point of sale package which obscures the warning statement, the point of sale package must have the signal word and the following wording: "Read cautions on individual containers carefully."

Date: Apr. 25, 2023.
